- TypeScript

RISK LEVEL: HIGH

Health Score

C

Handoff Ready

D

Supply Chain

The Bottom Line

Your system has 3 serious issues putting you at risk of downtime or unexpected failures. Every week this stays unfixed increases the cost and risk. See the full report for a step-by-step fix plan with time and cost estimates.

Key Indicators

Handoff Readiness	C (60/100)
Decent foundations, but a new developer would need 1-2 weeks to ramp up.	
Supply Chain Resilience	D (20/100)
Significant supply chain risk — your code is vulnerable to dependency attacks like the LiteLLM incident.	
Growth Readiness	Structural gaps
Structural issues will make growth expensive. Address the foundations before scaling the team or the traffic.	
Cost of Delay	\$1,800/week
Issues are accumulating cost but aren't emergencies. Plan fixes within the next sprint.	

Risk Summary

3	High
2	Medium
2	Low
Passing (3):	README, Linter, Type Safety
Missing (7):	License, CI/CD, Tests, Docker, Env Example, Deploy Config, Security Tooling

Want the Full Picture?

This free report covers the highlights. Unlock the full analysis:

- Detailed risk assessment with fix recommendations
- Priority action items — what to fix first and why
- Cost of Delay timeline — what inaction costs per week
- Quick wins you can implement today
- Security findings with file-level detail
